COMPANY PROFILE

Brunton Wire Ropes FZCo., is a rope specialist, manufacturing steel wire ropes in Jebel Ali Free Zone, Dubai from the year 2003. It is one of the 5 global plants that the billion-dollar Rope & Specialty steel giant USHA MARTIN GROUP has and is one of the best in the world.

This company, backed by 100 years plus group experience in evolving advanced rope designs, with elaborate manufacturing base globally possessing state-of-the-art machines, rich experience on negotiating the dynamic market forces, has today become a 'REAL SOLUTION PROVIDER' to the markets it serves. Brunton Wire is proud to have the products sold continuously to more than 31 countries in Europe, North America, South America, North Asia, Australia, Africa, and Middle East & South East Asia.

This plant, in Dubai, produces & supplies steel wire ropes for Oil & Gas, Crane, General Engineering, Fishing, Dredging, Mining, Elevator applications having a very wide diameter range between 3mm and 77mm. The capability of producing and selling new generation ropes like the compacted & plasticated ropes have helped the consumers to get a complete solution from a single plant.

The elaborate testing facilities from raw material to final product gives the plant a qualitative edge over many competitors and thus, enjoys the confidence of many major oil giants, mining groups, elevator OEMs, big rigging companies. This plant is QMS certified and additionally has Lloyds & API (American Petroleum Institute) certifications. As a result Brunton Wire Ropes has grown more than 300% in 15 years.

The extensive inventory planning clubbed with a sound logistics leverage due to its Geographical position & supported by a large efficient port like Jebel Ali, have helped Brunton Wire's customers to get ropes faster in all parts of the world.

The group's R&D is continuously helping Brunton Wire to offer new designs to the consumers thereby, gaining a technological leadership.

In short, the backward integration model of the Usha Martin Group in resonance with the quality excellence datum and aided by the experienced executive leadership, have made Brunton Wire Ropes FZCo., to be a name that spells enormous reliability to all sections of wire rope consumers all around the globe.

Certification

WIRE ROPES

The "EDGE" over Competition

Quality and Performance

The QUALITY POLICY is a statement relating to a broad spectrum of VALUE ADDED features, which together aim to ensure Quality, Reliability and Customer Delight. The following attributes give insight to the facts which precisely help you to identify what differentiates BRUNTON WIRE from its competitors.

Engineering

Brunton Wire's engineering expertise differentiates itself from the competition. BWR products are manufactured with Raw Materials from USHA MARTIN , world leaders in speciality wire & rope products, using state of art machinery. In house designed machinery and procedures for selecting and testing raw materials to allow for extra strength, extended fatigue performance and improved rotational resistance have resulted in BRUNTON WIRE being viewed as the STANDARD for the chosen industry, both Nationally and Internationally.

BWR is proud to have its facility awarded certification for our Quality Assurance Program according to BS EN ISO 9001 Standards. The plant has also been approved for API 9A certification.

BWR is one platform which has integrated Product & Process technology, manufacturing excellence and testing standards, application engineering & training know-how of the whole group.

Commitment to Quality

Brunton Wire tests a sample from each production batch to destruction in order to designate each rope by the actual breaking force which is stated on the test certificates. This gives the user a confirmation that the rope has met or exceeded its specified minimum breaking force value. Many of our competitors mention the calculated minimum breaking force value which is not verified until used by the Valued Customer. BWR has also the testing facilities for fatigue life, crush resistance and rotational characteristics for the products within our High Performance Range.

Customer Service

Service at Brunton Wire is second to none. BWR believes that excellence is achieved not only by having the product available when you want it, but by also providing a knowledgeable team of field sales representatives, a fully trained and capable Customer Services Team dealing specifically with enquiries and orders. The expert rope engineers provide a complete solution to the valued end user, with their ability to interpret their special needs from design through to manufacture and application. Brunton Wire realizes that our customers should be knowledgeable about the properties, installation, use, inspection and maintenance of our products. Thus, we provide formal product training through seminars and continuous interaction.

QUALITY GUARANTEE

Guaranteed Raw Material Quality

Good raw material input at the beginning of the rope making process combined with tight process control ensure consistently high quality in the finished rope. Usha Martin manufactures steel and rod to International standards and to even more exacting internal standards through its mini blast furnace - arc furnace - ladle furnace - vacuum degassing electromagnetic stirring - continuous casting route.

A close and unique co-operation between company owned ISO 9001 certified steel making, rod manufacturing and wire drawing facilities guarantee production feed materials which are "tailor made" to attain the required properties of ductility and tensile strength which are essential in the finished rope.

Guaranteed Breaking Force

As well as operating a rigorous programme of testing throughout the production process Brunton Wire confirm the minimum breaking force of each and every finished rope with an actual test to destruction.

The Test Certificate which is supplied with every rope will indicate a minimum guaranteed breaking force and the actual breaking force at which the test sample broke.

The Brunton Wire testing facility is approved by Lloyds Register of Shipping.

Guaranteed Quality Systems

Certification to ISO 9001 requires that Brunton Wire document all work procedures, processes and related activities covering design, development, production, shipping and commercial activity.

ISO 9001 is a guarantee to our customer's that we will do exactly what we say we are going to do. Wire and Wire Ropes Division at Ranchi is the first and the only one in India to receive the prestigious award for excellence in TPM from Japanese Institute of Productivity Management (JIPM). Brunton Wire is also having the API-9A monogram.

Guaranteed Bending Fatigue Characteristics

Bending fatigue resistance is the ability of the wire rope to withstand repeated bending over a sheave under constant or fluctuating loads.

The ability to withstand bending fatigue will, along with other factors, determine the life of the rope and is therefore of interest to both the rope maker and the crane operator.

INFRASTRUCTURE

Wire Spooling & Long Stranding Machines (18 Bobbin, 25 Bobbin & 3 no. 36 Bobbin)

Seven Bobbin Skip Strander

6 x 60 Closer

High Speed Wire Rewinders

Fatigue Testing Machine

Brunton Wire Wire Ropes FZCo. has comprehensive manufacturing and testing facilities to make a wide range of wire ropes of various Constructions & Applications, starting from wire. At present it has large number of machines, some of them are listed below.

- High Speed Wire Rewinders
- 37 Bobbin Stranding Machines
- 25, 19 & 18 Bobbin Stranding Machines
- Series of 6 & 7 Bobbin Stranding Machines
- High Speed Skip Strander
- 8 & 6 Bobbin Closing Machines
- Wet Drawing Machines
- 37 Bobbin Planetary Closing Machine for Crane Rope
- 50T Planetary Closing Machine
- 'State of the Art' 25 Mtrs long 200 T Tensile Testing Machine
- Wire Tensile Testing Machine
- Fatigue Testing Machine for Elevator Rope
- Rigging shop with 'Hydraulic Presses', Automatic cut to length machine & Rigging Towers

CRANE ROPES

The global success of Brunton Wire Powerform® compacted crane rope and Hyflex non compacted crane rope is based on an uncompromising commitment to quality and product development which has been driven by a dynamic and technically demanding marketplace.

State of the art ISO 9001 certified manufacturing facilities and tight process control from steel making to rod manufacture and through to finished wire rope ensure consistently high quality in the finished crane rope.

All Brunton Wire crane ropes are supported by an expanding global distribution network which can offer expert advice to both crane manufacturers and operators.

Brunton Wire manufactures crane ropes for all applications like mobile cranes, quay cranes, gantry cranes, mobile harbour cranes, tower cranes, EOT cranes, crawler cranes, wheel

mounted cranes, jib crane, truck mounted crane etc. We have annual contracts with many companies for supply of crane ropes. Our Powerform®, Hyflex and plasticated ropes are being used in cranes made by Liebherr, Tadano, Grove, Manitowac, Kobelco, Gottwald, Terex, Potain, Anupam etc. giving very good performances all over the world. Our crane rope demand has increased by 200 percent in the last 5 years due to the high performances obtained by the customers. The Group's R&D, in Italy, is already in the process of developing new designs for high performance ropes and would launch them on successful completion of joint reviews with different Original Equipment Manufacturers.

POWERFORM® COMPACTED ROPE

A Powerform® compacted rope is a steel wire rope which has been manufactured using individually compacted strands. During the compaction process the outside diameter of the strand is reduced and steel moves into the empty voids between the wires within the strand.

The forming process also produces a very smooth exterior strand surface.

The resultant rope has a very high steel fill factor and consequently a relatively high minimum breaking force for any given diameter when compared with a conventional rope.

The compacted strand has very favourable internal contact conditions when compared with the point contact of round wires within a normal strand.

Exterior contact conditions are equally favourable. The smooth surface of the compacted rope offers a wider bearing surface to the sheave or drum groove.

Inter strand contact and contact between adjacent laps of rope on the winch drum is also improved.

Brunton Wire compacted ropes are referred to as "Powerform®" and are available in a number of constructions.

POWERFORM® SELECTION

Optimised crane design

The high breaking load to size relationship can allow crane manufacturers to optimise the design of crane components such as the winch drum and sheaves whilst still complying with international crane design standards.

Long life

Laboratory fatigue testing indicates that it is possible to achieve up to two times normal rope life when comparing a Powerform® rope with a conventional rope of equivalent construction.

Greater resistance to crushing in multi-layer coiling situations

Powerform® ropes are recommended for all multi-layer coiling situations where crushing on lower layers is inevitable. The more solid cross section of the Powerform® rope offers much greater resistance to this type of damage.

More effective resistance to crushing at crossover points

Because of the higher steel fill factor Powerform® ropes offer much better resistance to crushing damage at crossover points on the winch drum.

Greater resistance to "Interference" at the drum

Abrasive wear between adjacent laps of rope which is normally most severe where the rope moves on and off the drum can be minimised by using a Powerform® rope.

Reduced wear on sheaves

The smooth exterior of the Powerform® rope can lead to reduced abrasive wear on both the sheave and rope.

BEND FATIGUE TESTING

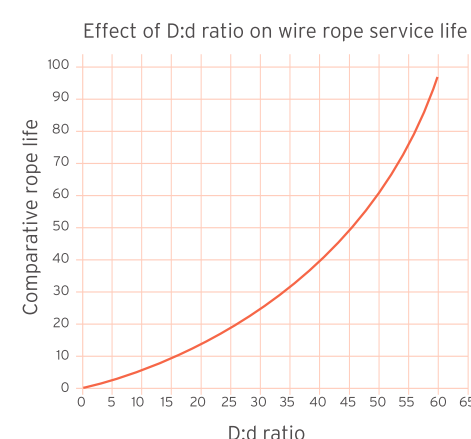

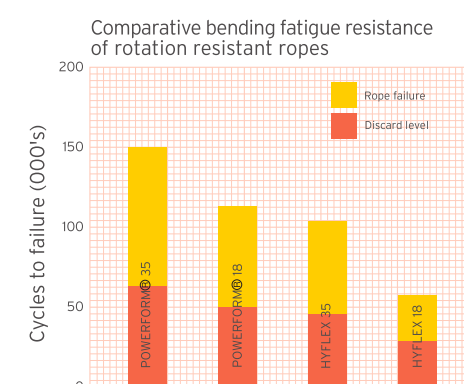

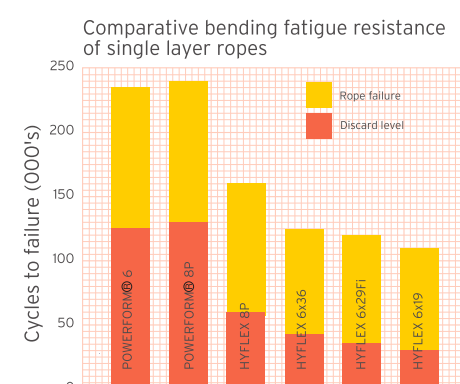

Resistance to bend fatigue is a key factor in determining the service life of wire rope and is therefore of great interest to both the rope manufacturer and the crane operator. Extensive comparative bend fatigue testing is carried out at Brunton Wire in order to continuously develop and improve crane rope products.

Fatigue testing involves cycling a length of rope through a sheave at a constant tension. The number of operating cycles is recorded at a point where the rope is rejectable under recommended discard levels specified under ISO 4309. The test

continues until the rope under test is unable to sustain the load any longer and again the number of cycles is recorded.

Based on results obtained from an ongoing bend fatigue testing programme the following charts give an indication of the likely comparative performance which can be obtained

from various rope constructions. The lower charts show the importance of lubrication in-service and the relative improvement in performance as sheave diameter (D:d ratio) increases.

GUIDE TO APPLICATION & ROPE DUTY

POWERFORM® 35/35P

- Powerform® 35/35P has the highest strength of all low rotation hoist ropes.
- A sample of rope from each production batch is tested to destruction in order to confirm compliance with catalogue breaking force values.
- Maximum resistance to rotation.
- Suitable for use on single part and multi-part hoist reeving systems.
- High fatigue life resulting from the unique compaction process.
- Increased resistance to crushing. Recommended for multi-layer spooling operations.
- Increased abrasion resistance resulting from the unique compaction process.
- Optional plastic impregnation. (P) signifies full plastic impregnation of the Steel Core.
- Fully lubricated in manufacturing.
- Langs lay construction offers maximum resistance to wear.

POWERFORM®18

- Powerform® 18 is a high strength rotation resistant hoist rope.
- A sample of rope from each production batch is tested to destruction in order to confirm
- compliance with catalogue breaking force values.
- Good resistance to rotation verified by testing on the in-house torque/turn machine.
- Suitable for use on single part and multi-part hoist reeving systems.
- High fatigue life resulting from the unique compaction process.
- Increased resistance to crushing. Recommended for multi-layer spooling operations.
- Increased abrasion resistance resulting from the unique compaction process.
- Fully lubricated in manufacturing.

Note: Rope Sizes and Breaking Force not shown in the standard table, may be available on request and prior confirmation.

POWERFORM® 6/6P

- Powerform® 6 is a high strength rugged six strand rope ideal for situations where longer service life is required.
- A sample of rope from each production batch is tested to destruction in order to confirm compliance with catalogue breaking force values.
- Powerform® 6 can be substituted for any six strand construction to improve service life and reduce total cost.
- High fatigue life resulting from the unique compaction process.
- Maximum resistance to crushing. Recommended for multi-layer spooling operations.
- Increased abrasion resistance resulting from the unique compaction process.
- Fully lubricated in manufacturing.
- Optional plastic impregnation (P) signifies full plastic impregnation of the steel core.

Powerform® 6

Powerform® 6P

Standard Characteristics Powerform® 6/6P		
Construction	6xK36SW(14-7+7-7-1)-CWR 6xK41SW(16+8+8-8-1)-CWR	
Compacted	Yes	No
	◆	
Tensile Grade N/mm ²	1770	1960
	◆	◆
Finish	Bright	Galvanised
	◆	◆
Lay Direction	Right Hand	Left Hand
	◆	◆
Lay Type	Ordinary	Langs
	◆	
Average Fill Factor (%)	67.5	
Turn value at 20% of breaking force degrees/rope lay	58	
Nominal rope lay length (NRD = Nominal Rope Diameter)	6.5 x NRD	
Discard Criteria	Refer to ISO 4309:1990	
Warning : Powerform® 6/6P in Langs lay must only be used in applications where both ends are secured and are unable to rotate.		

Typical Applications

BOOM HOIST ■
 MAIN HOIST ■
 RACKING/
 TROLLEY ■

* For higher lifting heights a rotation resistant rope should be selected.

 • POWERFORM 6P is available only for 16 mm and above on special request and prior confirmation.

POWERFORM® 8/8P

- Powerform® 8P is a high strength eight strand rope with plastic impregnated core ideal for situations where longer service life is required.
- A sample of rope from each production batch is tested to destruction in order to confirm compliance with catalogue breaking force values.
- High fatigue life resulting from the unique compaction process.
- Maximum resistance to crushing. Recommended for multi-layer spooling operations.
- Increased abrasion resistance resulting from the unique compaction process.
- Greater surface contact area resulting from the eight strand construction and compacted finish give longer rope life and reduced sheave wear.
- Fully lubricated in manufacturing.
- Optional plastic impregnation of the steel core. (P) signifies full plastic impregnation of the steel core.

HYFLEX 6X36

- High quality flexible 6x36 class crane rope.
- Consistent performance.
- Fully lubricated in manufacturing.
- Independent wire rope core.
- A sample of rope from each production batch is tested to destruction in order to confirm compliance with catalogue breaking force values.
- Supplied in high strength 1960N/mm² tensile steel as standard.

Hyflex 6x36

Standard Characteristics Hyflex 6X36		
Construction	6X36(14-7+7-7-1)-CWR 6x41(16-8+8-8-1)-CWR	
Compacted	Yes	No
		◆

CUSTOMER SPREAD

FISHING ROPES

The global success of Brunton Wire Ropes is based on an uncompromising commitment to quality and product development which has been driven by a dynamic and technically demanding marketplace.

State of the art ISO 9001 certified manufacturing facilities and tight process control from steel making to rod manufacture and through to finished wire rope ensures consistently high quality in the finished Fishing Rope.

Brunton Wire manufactures fishing ropes in different constructions for trawlers and small fishing boats. It not only manufactures fishing ropes having a wide diameter range but also has different options with respect to constructions, galvanization and cores. Brunton Wire also

manufactures the new generation compacted fishing ropes that have higher breaking loads and give better performances. The group also produces plastic valley filled fishing ropes that are in high demand at various fishing harbours in the world. Another success story in fishing ropes has been the launch of combination fishing ropes. This superior design has attracted many fishing companies to use this rope and save cost and also get longer life. We also have the capability of manufacturing fishing ropes with steel cores and ropes with equivalent to galfan galvanised coating for deep sea trawling and long voyages. Further, this group manufactures fishing ropes with plastic impregnated core and fully plasticated fishing ropes.

619S

Typical Construction
 6x19S(9-9-1) - CFS
 Drawn Galvanized, Right Hand or Left Hand Ordinary Lay

- Specifically produced for ultimate wear & abrasion resistance.
- Superior quality galvanization for extra life.
- Petroleum based lubricant for superior corrosion resistance - Luberite.
- Unique Identification Tag symbolises usage of original Brunton Wire product.
- Customised coloured strand in case of customer requirements.
- Polypropylene core for flexibility wherever required.
- Steel core for increased strength and prevention of crushing on the winch drum.
- Sample from each production batch is tested in order to conform completely with customer specifications.

ELEVATOR ROPES

No other application of steel wire ropes demands such close manufacturing tolerances and such high quality in materials as the elevator industry. No other industry demands such high safety factors.

Brunton Wire is always striving to improve on these standards and offer a complete range of elevator/lift ropes. These ropes are designed to satisfy most OEM specifications and are available for main suspension, governor and compensating duties.

We not only act as suppliers but also work closely with our customers in their endeavour to deliver the highest quality standards, better durability and longer service life.

Fatigue tests and on load tests on our ropes have demonstrated that they are far superior than the comparative industry standards.

We operate a Quality System in accordance with ISO 9001 and have complete control of manufacturing process from wire to the finished rope.

Today, the group is actively working with Original Equipment Manufacturers like Otis, Schindler, Kone, Thyssen Krupp, Mitsubishi, Fujitec for a wide range of elevator models that each one of them manufactures. In addition to having contracts with them in many countries, our elevator ropes are very popular with big elevator service companies throughout the world. Our capacity to cater to them with all types of ropes in various constructions and cores has made this whole group a very popular choice for the OEMs and the service companies. Furthermore, this group takes pride to have the widest logistics infrastructure in the form of stocking points of its own and that of the dealer networks in the world. We are also equipped with the experience of having the customers served with cut to length elevator ropes for distribution to the different sites.

8X19S - NFC

Typical Construction
 8X19S(9-9-1) - NFC

6x19 Classification
 + Fibre core (NFC)

8x19 S+ Fibre core (NFC)

F819S-FE TRAC

8x19 Classification
 + Fibre core (NFC)

GOVERNOR ROPES

NOMINAL ROPE DIAMETER		APPROX. WEIGHT/MASS		MINIMUM BREAKING LOAD/FORCE 1770 N/mm ²

8X19 CLASS STEEL CORE

Typical Construction
 8 x 19S (9-9-1) + IWRC
 8 x 25F (12-6F-6-1) + IWRC
 8 x 19W (6+6-6-1) + IWRC

Preferred Rope Construction

8-strand wire rope with

- Seale
- Filler or
- Warrington strand construction and a Steel Core (IWRC) at the centre
 - Very Good Bend Fatigue values
 - Very Good Elongation properties
 - Better Crushing resistance
 - Better Contact on drum and sheaves

8 x 19S (9-9-1) + IWRC

8 x 25F (12-6F-6-1) + IWRC

8 x 19W (6+6-6-1) + IWRC

Table as per ISO 4344

16	5/8	104	134	143	152	143	161
18		132	170	181	193	181	204
19	3/4	147	190	202	215	202	227
20		163	210	224	238	224	252
22	7/8	197	254	271	288	271	305

Note : Rope sizes and breaking force not shown in the table, may be available on request and prior confirmation.
 # Equivalent Nominal Rope Diameter ('inch') is for reference only as the same has been superseded by metric units (mm)
 * 1180 / 1770 rope grade is equivalent to Traction steel grade, 1370/1770 may also be used
 ** 1570 / 1770 rope grade is equivalent to EHS steel grade

*Please treat this sheet as revised page No. 58

8X19 CLASS FIBRE CORE

Typical Construction
 8 x 19S (9-9-1) + FC
 8 x 25F (12-6F-6-1) + FC
 8 x 19W (6+6-6-1) + FC

Preferred Rope Construction

8-strand wire rope with

- Seale
- Filler or
- Warrington strand construction and a Fibre Core at the centre
 - Most frequently used worldwide
 - Good Bend Fatigue due to smaller wires
 - Good Elongation properties
 - Better Contact on drum and sheaves

8 x 19S (9-9-1) + FC

8 x 25F (12-6F-6-1) + FC

8 x 19W (6+6-6-1) + FC

when submitted to bending fatigue & tension.

Typical values for Stretch and Diameter reduction

SAFETY INFORMATION

- Wire rope will fail if worn out, shock loaded, overloaded, misused, damaged, improperly maintained or abused.
- Always inspect wire rope for wear, damage or abuse before use.
- Never use a wire rope which is worn out, damaged, corroded or abused.
- Never overload or shock load a wire rope.
- Use the correct design factor for the application.
- Inform yourself : Read and understand the machinery manufacturers handbook and guidance from the wire rope manufacturer.
- Refer to applicable directives, regulations, standards and codes concerning inspection, examination and rope removal criteria.

All statements, technical information and recommendations contained herein are believed to be reliable, but no guarantee is given as to their accuracy and/or completeness. The user must determine the suitability of the product for his own particular purpose, either alone or in combination with other products and shall assume all risk and liability in connection therewith.

Whilst every attempt has been made to ensure accuracy in the content of the tables, the information contained in this catalogue does not form any part of a contract.
